SUPPLEMENTARY INFORMATION: The solicitation document contains all the information relative to this action for prospective applicants. The solicitation is targeted for release on or about January 7, 1997. The actual work to be accomplished will be determined by the experiments and diagnostic techniques that are selected for award. Proposed experiments and diagnostic techniques will be evaluated through scientific peer review against predetermined, published and available criteria. Final selection will be made by the DOE. It is anticipated that multiple grants will be awarded within the available funding. The unique resources of the NLUF are available, on a no-fee basis, to scientists for state-of-the-art experiments primarily in the area of inertial confinement fusion (ICF) and related plasma physics. Other areas such as spectroscopy of high ionized atoms, laboratory astrophysics, fundamental physics, materials science and biology and chemistry will be considered on a secondary basis.

The LLE was established in 1970 to investigate the interaction of high-power lasers with matter. Available at the LLE for NLUF researchers is the upgraded Omega Laser, a 30-40 kJ UV, 60 beam laser system (at 0.35um) suitable for direct-drive ICF implosions and other experimental configurations. This system is suitable for a variety of experiments including laser-plasma interactions and atomic spectroscopy.

The NLUF program for FY92 will support experiments that can be done with the Omega Laser at the University of Rochester and development of diagnostic techniques suitable for the Omega Laser system. Measurements of the laser coupling, laser-plasma interactions, core temperature, and core density are needed to determine the characteristics of target implosions. Diagnostic techniques could include either new instrumentation, development of analysis tools, or development targets that are applicable for 30-40 kJ implosions. Additional technical information about the available facilities and potential collaboration at the NLUF can be obtained from: Dr. John M. Soures, Manager, National Laser Users' Facility, University of Rochester/LLE, 250 East River Road, Rochester, NY 14623-1299.

Dated: November 19, 1996.

Chief, Financial Assistance Branch, Program Acquisition and Assistance Division.

AGENCY: Office of Environmental Management, Department of Energy.

ACTION: Notice of certification.

SUMMARY: The Department of Energy (DOE) has completed remedial actions to decontaminate properties in Oxford, Ohio. Formerly, the properties were found to contain quantities of residual radioactive material resulting from activities conducted by contractors for DOE or its predecessors at the former Alba Craft Laboratory, Inc. Radiological surveys show that the properties now meet applicable requirements for use without radiological restrictions, and the docket related to cleanup activities is now available.

ADDRESSES: The docket is available from:

Public Reading Room, Room 1E-190, Forrestal Building, U.S. Department of Energy, 1000 Independence Avenue, S.W., Washington, D.C. 20585.
